

AEROTECH AUTOMATION1

PWM Servo Drive with Motion Controller **Automation1 iXC2e**

Powerful PWM Drive & Full Motion Controller

Our high-performance, compact Automation1 iXC2e PWM servo motor drive with integrated motion controller is two solutions in one: it's capable of complete machine control and provides sub-nanometer levels of position control to linear or rotary servo motors, voice coil motors, stepper motors or any precision linear or rotary stage driven by one of these motor types. The silicon carbide (SiC) power amplifiers feature ultra-precise PWM switching, enabling excellent motor control performance.

The powerful Automation1-iSMC motion controller is loaded directly onto the same hardware that runs the drive, which in turn manages the trajectory of up to 12 axes of control over the HyperWire motion bus.
